

Recording the service audio using the MP3 recorder.

Step 1

Here is the device we use to record our services.

Step 4

Pressing the record button once puts the device into record pause mode. Press the button a second time to start recording. Press the button a third time to stop the recording.

Important Note:

If the recording is not stopped before the device is powered off then all the data on the SD Card will be corrupted and rendered unusable. Please stop recording before turning the power off.

Step 2

Turn the device with the switch on the bottom left.

Step 3

Make sure that the screen says that you are recording through input 1 and input 2 and not the microphone.
